

# Hi

This single page Simple Little eBook was typed on the laptop using Microsoft Word.

I even inserted this “laptop” picture, adjusted the size, and centered it.

Then I **changed the font** a couple of times just for practice. **Then I changed the color of the font** and made it **bold**, *then made some bold red italics* and then I really wanted your attention so I **added background** & **highlighted the text for emphasis**.

**It was all done very easily in Word.**

Then I just clicked the  “Create Adobe PDF” button on the Word toolbar and ‘viola’ I was whisked away to Authorsville. I’m an eBook author and you are able to read my simple, little eBook.

Then I wanted to edit my work, so I just opened the original Word document and made changes. Then I let Acrobat do it’s thing again, and ‘viola’ I had a 2<sup>nd</sup> edition.

I even inserted  
AutoShapes

*and WordArt*  
*and WordArt*

IT WAS SO EASY, I DID IT ON A LAPTOP.
